nbr flanks: group all, 157 loci in 157 leaves (157 in the tree, 152 context types)

release rN.3, level pfam, window 6g, distance j, cut 0.5; a family's colour is the same in every group of the run; % = share of the group's loci holding it

rows: 60 of 157 leaves (--figure-rows 60): the leaf with the most loci of each context type, then the leaves with the most loci; the tree is restricted to them
